CS411 Architectures (and a little project management)

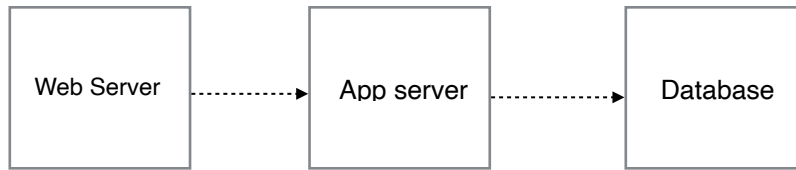

1. Of the architectures that we looked at, which is the one that most web sites based on?

2. In a batch architecture, what typically happens when a step in the pipeline is delayed?

3. In the MVC (model-view-controller) architecture, which component holds state?

4. In a thick-client architecture, most of the work is done in the ____.

5. In the following system, which component do you think should have the fewest number of maximum connections in its configuration in order to minimize the load on the database?

6. What's the difference between top-down and bottom-up estimating for projects?

7. What does it mean to say that a class/ object uses a composite architecture?

8. When an object has both private and public methods (functions), what are the public methods typically used for?

Cultcha Question (0 points): The Curse of the Bambino started here: This former Red Sox slugger, sold to the accursed New York Yankees in 1919, lived at 680 Comm Ave (roughly where Campus Convenience at Warren towers is now).
